"It was interesting to note the success of double unrelated cord blood cell transplantation in a patient of Aplastic Anemia at Nasik. The successful procedure indeed underlines the need of cord blood banking for future needs. This has reduced the cost of retrieval in India. I hope this draws attention to the need of a large number. of patients awaiting treatment for conditions like Aplastic Anemia."

Dr. Amar Verma,
President Genetics Chapter -IAP

>97% chance of finding a match

Ready access to 85,000+ qualified cord blood units

HOPE

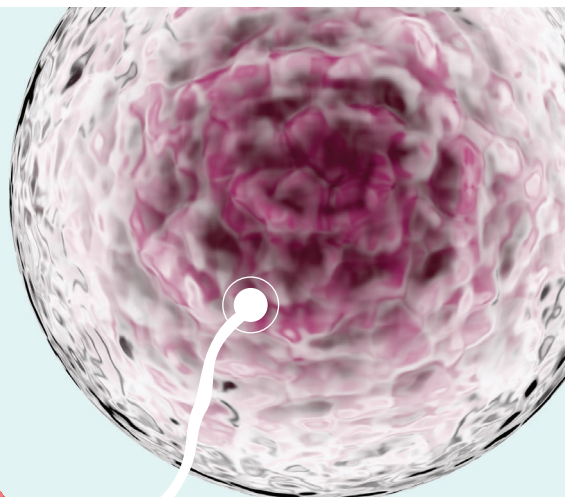

is life

Choose LifeCell, Choose Hope!

Preserve Hope With LifeCell, India's Largest & Most Trusted Community Stem Cell Bank

What Are Stem Cells?

They are the master cells which act as the basic building blocks of our body. They can divide into different types of cells such as blood cells, muscles cells, brain cells & so on. There are different sources of the special cells such as the umbilical cord blood, bone marrow and peripheral blood.

What Is Umbilical Cord Blood Banking?

The baby's umbilical cord blood is a rich source of blood-derived stem cells. As part of umbilical cord blood banking, stem cells derived from the cord blood by a safe & painless method, are cryopreserved in a stem cell bank for future use.

What Is Community Stem Cell Banking?

It is a unique banking model, where the baby's umbilical cord blood stem cells are added to a common pool. It works on the concept of sharing preserved stem cells exclusively amongst its community members to find matching donor stem cells. Unlike the private banking model, this model not only provides complete protection to the baby but also protects the siblings, parents and grandparents (maternal & paternal).

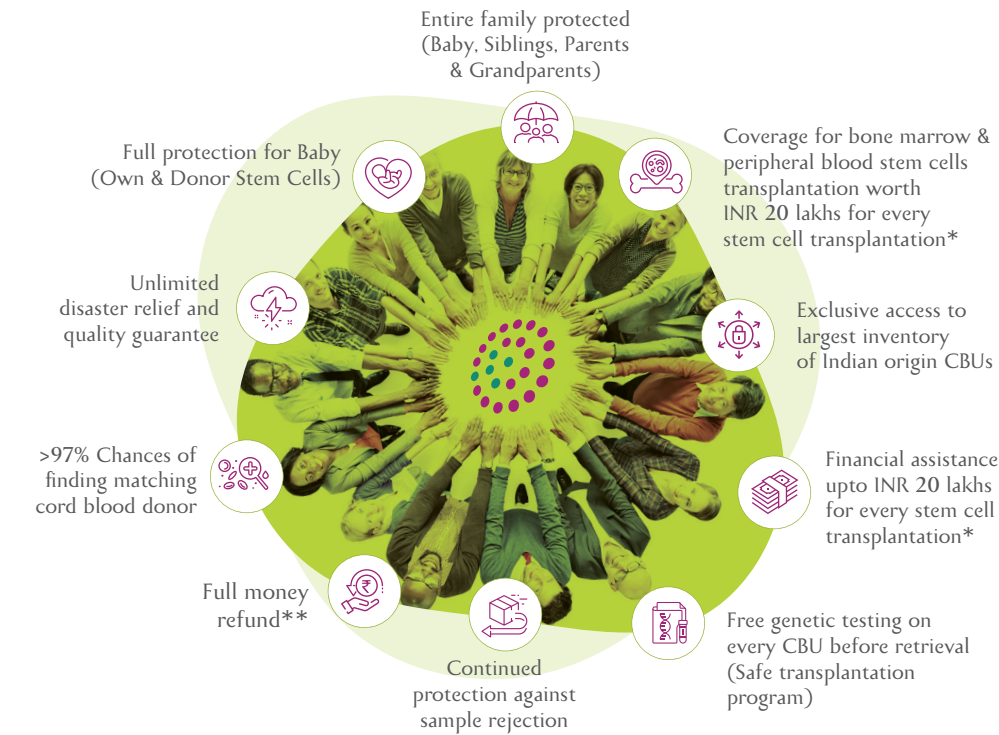

Did You Know?

There are currently 90+ medical conditions treatable by blood stem cells. >1.3 million blood stem cell transplants have taken place in the last 50 years. There are 500+ ongoing clinical trials testing the ability of stem cells to treat neurological disorders, cardiac disorders & so on. 1 in 217 will undergo blood stem cells transplantation by the age of 70 years.

LifeCell's Pioneering Efforts In Community Cord Blood Banking Wins Accolades From Pediatric And Gynaec Medical Bodies.

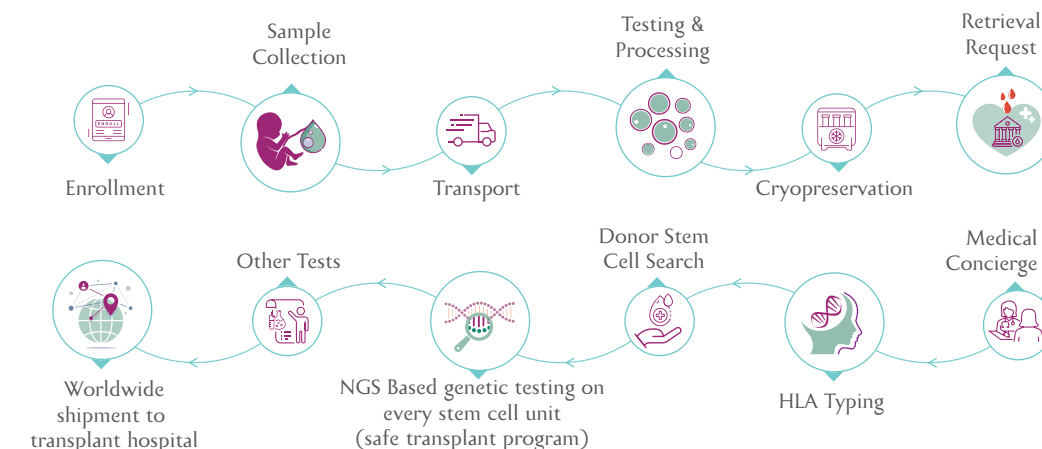

Exclusive Benefits Of Community Banking

* For baby, sibling & parents for the initial 21 years

** Except sample collection charges, all fees will be refunded upon the use of your baby's cord blood by another community member, with continued benefits for your baby and entire family till baby's 75 years of age.

How Does Community Banking Work?

LifeCell Offers Complete Healthcare Solution for Your Entire Family!

A Breakthrough Next-generation Sequencing Technology (NGS) Based Test For Your Newborn

Expedites the diagnostic journey for thousands of genetic disorders.

Analyses 4000+ genes related to about 1500 early childhood-onset disorders, many of which present within the first 28 days of life.

Allows early diagnosis and faster treatment, thereby saving hospital costs and allowing improved quality of life for the baby.

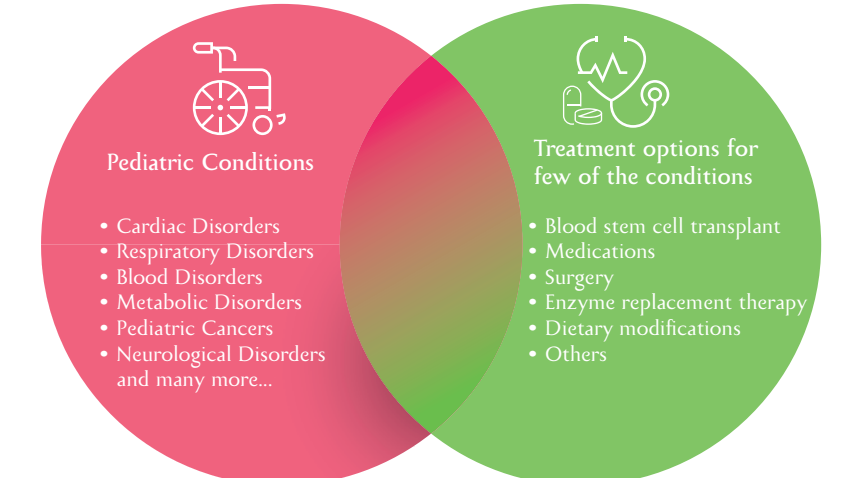

Offers free genetic counselling & clinical support.

Plus, helps plan future pregnancies.

Conditions diagnosed with GenomeScope and a few treatment options

* This test can only be ordered by a Physician. If you're unable to find one, LifeCell shall appoint a Physician on your behalf at no additional cost to you.

** Your result will only be shared with the ordering Physician and made available to you online.
